

Meeting with Prof. Philippe Gourbesville

Team Red had a privileged opportunity to meet Professor Philippe Gourbesville during his visit to TMSI on 23rd July 2007. Professor Gourbesville highlighted to Team Red and to all other participants the concept of Hydro Asia Project at great depth and thoroughly explained the mode of operation of the Hydro Asia platform for updating the research findings and information, and uploading different files too.

Further, Professor Gourbesville elucidated to us the principal objectives of the program and the expected outputs from the exercise. He also provided narrative description and insights with regard to our study area and demonstrated the use of ArcGIS more efficiently and effectively in our project. Team Red has indeed been fortunate to have met and interacted with Professor Gourbesville, and his thoughts and inputs have been very informative and motivational.
