

Summary of the fourth weekly meeting

Date/Time: 23th july 2009/ 18:00

Media: MSN

Attendance: all members

The topics for the meeting are the following:

- First contact with Sam.
- Discuss about hydrological part.
- Project for the next week.

First contact with Sam:

Sam introduces himself by email during the last week, but we meet him today by MSN. Sam has been integrated to the hydrological team with Naniz and Patrice.

Discuss about hydrological part:

Christophe proposed to use two different ways:

- By software (MOUSE);
- By excel in creating the hydrograms.

We decide to do the two solutions.

To make this job the Arcgis team should do the coefficient analysis.

Project for the next week:

Modeling:

Try to run the simulation with Mouse.
Input the data SWMM.

Arcgis:

Finish calculating the run-off coefficient function of the sub-catchment area.

Hydrology:

Compute the hydrology and find the best equations.
