

## Summary of the 6th Weekly Meeting

Date/Time: 4th August 2009 / 18.00 Korean time

Media : MSN Messenger Group Talking

The program for this meeting is the following:

- Work realized by Modeling Team
- Work for the next week
- Choosing a reporter

Before starting the conversation, Chris asked to the other members their date of birth and their major in order to update the website.

### 1. Work realized by Modeling Team

MOUSE : Inputting the manholes, the pipes, the catchments. Using the data available in the HydroAsia website. The first simulations were done to check if everything works.

SWMM : the same job as Mouse was done during the week. The first simulations were ok.

In order to compare the result between MOUSE and SWMM we decide to input exactly the same data into the models (logical !). We decided to use the model B for the hydrological analysis because SWMM's runoff model is the same as MOUSE's model B.

### 2. Work for the next week.

Contact Pr Choi to validate the job done, and speak about hydrology task.  
Continue working in SWMM and MOUSE.

### 3. Choosing a reporter

No problem to choose it, because I promised last week to do it...

**Summarized and Written by Chris**
